Part of a complex consisting of ERC2, RIMS1 and BSN (By similarity). SUBCELLULAR LOCATION: Cytoplasmic; localized to the active zone of presynaptic density (By similarity).

TISSUE SPECIFICITY: Exclusively expressed in brain. PTM: Myristyolated. The N-terminal myristyolation is not sufficient for presynaptic localization (By similarity).

Proc. Natl. Acad. Sci. U.S.A. 98:4136-4141(2001).
-!- FUNCTION: This enzyme is an endounclease that degrades the RNA of
RNA-DNA hybrids specifically (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          STRAIN=ATCC 1989 / CB15;

The present sequence represents a Monkey antibody light chain linked to a heavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal epithelial tumour cells and in a subpopulation of normal human gastrointestinal epithelial cells. The target structure especially comprises alphaébeta4 integrin. This is a tumour-associated antigen. The antibody, and its fragments, are useful for treating conditions based on anti-anglogenic mechanism in humans. They are useful for treating human metastatic and malignant disease, in vitro, in vivo diagnosis and prognosis of human malignant disease, comprising tumour typing, tumour diagnosis and prognosis and prognosis and monitoring premalignant conditions. Quantitative in vivo diagnosis is carried out by determining the localization of antibody to tumour deposits in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

RESULT 2 AAR93164 ID AAR93164 standard; protein; 104 AA.

An anti-alpha6beta4 integrin light chain linked to a heavy chain.

(first entry)

09-JUL-2001 AAB68087;

į,

AAB68087 standard; protein; 249 AA.

RESULT 1

Gastrointestinal epithelial tumour cell; alpha6beta4 integrin; tumour-associated antigen; metastatic disease; malignant disease; tumour typing; tumour screening; tumour.

Synthetic. Macaca fascicularis.

The human monoclonal antibody D7C2, of isotype IgM, recognises a 30-32 kD polypeptide on the membrane of rhesus positive red blood cells. The antibody agglutinates rhesus positive cells but not rhesus negative cells and is useful diagnostically and also for preventing haemolysis in newborn rhesus positive babies. Recombinant IgM-D7C2 can be produced by comprising a D7C2 expression cassette. The present sequence is that of a recombinant IgM-D7C2 lambda light chain fused downstream of a signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Recombinant anti-rhesus D monoclonal antibody - expressed by baculovirus-transformed insect cells and useful for preventing haemolysis in new-born

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The human monoclonal antibody D7C2, of isotype IgM, recognises a 30-32 kD polypeptide on the membrane of rhesus positive red blood cells. The antibody agglutinates rhesus positive cells but not rhesus negative cells and is useful diagnostically and also for preventing haemolysis in newborn rhesus positive babies. Recombinant IgM-D7C2 can be produced by born risect cells which have been transformed by a baculoviral vector comprising a D7C2 expression cassette. The present sequence is that of the variable region of the IgM-D7C2 light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant anti-rhesus D monoclonal antibody - expressed by baculovirus-transformed insect cells and useful for preventing haemolysis in new-born
                                                                                                                         Human monoclonal antibody; immunoglobulin isotype IgM; agglutination; rhesus positive; rhesus negative; haemolysis; lambda light chain; variable region; insect host cell; baculovirus; recombinant production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

```
This polypeptide sequence comprises the VL domain of human scrv antibody to 10A6, which is specific for transforming growth factor (TGF) beta-1. It is encoded by a gene (AAT60384) isolated from a peripheral blood lymphocyte library. The antigen-binding domains of human antibodies (see AAM15522-40) to TGF beta-1 and/or beta-2 can be used to counter the adverse effects of TGF beta, such as (i) promotion of fibrosis (in dermal, ocular or keloid scarring, lung fibrosis, arterial injury, proliferative retinopathy, retinal detachment, adult respiratory distress syndrome, liver cirrhosis, post myocardial infarction, post-angioplasty ceferenosis, scleroderma, vascular disorders, cataract, glaucoma, or esp. ceremonis, scleroderma, vascular disorders, cataract, glaucoma, or esp. cor (ii) immune and inflammatory diseases (e.g. rheumatoid arthritis, amorophage deficiency diseases or macrophage pathogen infection). Nucleic acids encoding human antibody VH and VL can be used for prodn. of recombinant antigen-binding domains. These are highly specific, have low diseases (precombinant antigen-binding domains. These are highly specific, have low
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tunnour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAlDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (CVID) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TMP) super family and induces B cell to proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used 'in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP4728 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TMP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antitheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiaency (CVID) and acquired immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABP45991
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                           Interior describes have a minimum specifically bind. Continuous continuous continuous continuous describeration and differentiation. The antibodies of the invention have projectatic, immunosuppressive, immunostimulant, immunomodulatory, continuous prosectic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS in bloogical samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, theumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABPA3900-ABPA1228 represent the antibodies and fragments of the antibodies described in the method of

This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell cumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodilatory, antirheumatic and antiALDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (ALDS)). ABB43990-ABB47228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; mimunosuppressive; immunostimulati, immunomodulatory; antirheumatic; antiAlDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS;

BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAnDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and

The present sequence is that of complementarity determining region 1 (CDR1) of the light chain variable region (VL) of human single chain antibody (scrv) HID-1 (see AAY95198), which is directed against platelet 34. COPATOR (SCRV) HID-1. The HID series of scrv was isolated from a human synthetic VH and VL scrv library on the basis of their binding to platelet GPID. Whether displayed as surface proteins on a phagemid or secreted as free scrv by Escherichia coli, the HID scrv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scrv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet chain, including CDR fragments, are also claimed fragments of the scrv VH or VL chain, including CDR fragments, are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

corrections of the light chair variable region (VL) of human single chain antibody (scrv) HID-3 (see AAY95219), which is directed against platelet glycoprotein ID (GPLD). The HID series of serv was isolated from a human synthetic VH and VL scrv library on the basis of their binding to platelet GPLD. Whether displayed as surface proteins on a phagemid or secreted as free scrv by Escherichia coli, the HID scrv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scrv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Whethods of inhibiting aggregation of platelets, of binding human platelet (PPL) alpha and of selecting a VH or VL region of an antibody that.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fragments of the scrv VH or VL
                                                                                                                Isolated nucleic acid molecule encoding anti-human platelet glycoprotein
Ib alpha molecule useful for producing antibodies which inhibit platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibody; light chain, variable region, CDR1; human; gp96; cytostatic; complementarity determining region; antibacterial; virucide; fungicide; protozoacide; tumour; autologous immunization; anti-idiotypic.
                                                                                                                                                                                                               The present sequence is that of complementarity determining region 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .;

This invention describes a novel recombinant antibody (Ab) that binds native gp96. The product of the invention has cytostatic, antibacterial, virucide, fungicide and protozoacide activity. Complexes of gp96 with the peptides of the invention induce a immune response (cytotoxic T calls) specific for the associated peptides. Ab are used for purification or small amounts of tumour or infected complexes (C) with peptides (I), from small amounts of tumour or vicetular (C) are useful: (i) in human or veterinary medicine for autologous immunization, for treating tumour or veterinary medicine for autologous immunization, for treating tumour or veterinary (by viruses, bacteria, mycoplasma, fungi and parasites (procozoa)); and (ii) for raising anti-idiotypic antibodies. Ab make possible isolation of very pure gp96 in native form, even from small tumour samples, in a one-step chromatographic process that does not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

Cells from an unimmunised donor. Heavy chains from RNA from white blood cells from an unimmunised donor. Heavy chains from IgG and IgM antibodies were amplified separately. Four separate libraries were generated (IgG-K, IgG-lambda, IgM-Rand IgM-lambda). The purified scrv fragments were libraries were generated (IgG-K, IgG-lambda, IgM-Rand IgM-lambda). The purified scrv fragments were libraries were flowered into the phagemid pHENI for expression on the surface of fd ligated into the phagemid pHENI for expression on the surface of fd affinity selection for binding to phox.BSA by selection on tubes followed by analysis by ELISA. Of 96 clones analysed, 43 showed binding to both by analysis by ELISA. Of 96 clones analysed, 43 showed binding to both clones sequenced had the same sequence, the VH derived from a human VH3 family gene (AAR22571) and the VL from a human V lambda 3 family gene (shown here). The other was derived from a human VH family gene chuders. This sequence revealed a VH derived from a human VH family gene bunder). This sequence revealed a VH derived from a human VH family gene (AAR22570). See

AAT04638 encodes AAR80091 human derived light chain RT3 phage antibody. The DNA was used in the prepn. of catalytic antibody (CA) producing bacteriophage. The CAs can be used to activate/deactivate a biological function in an animal by enhancing the rate of cleavage, or formation of a specific bond within a mol. in vivo Length 103; 0; Indels Score 50; DB 2; Pred. Kenten JH,

Production of catalytic antibodies displayed on bacteriophages -comprises generating a gene library of antibody-derived domains inserting coding into a phage expression vector and isolating the catalytic

Example, Fig 20F; 117pp, English.

The invention relates to methods for producing catalytic antibodies displayed on a phage. The method comprises: (a) generating a gene library of antibody-derived domains; (b) inserting coding for the domains into a phage expression vector; and (c) isolating the catalytic antibodies. The phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The catalytic antibodies can be isolated by preparing an antigen; optionally immunising an animal with the antigen; generating a library of VH and VL domains from the immunised animal; cloning the VH cand VL domains into a phage expression vector to generate phage display antibodies; selecting phage display antibodies which bind specifically to the antigen; screening the selected phage display antibodies for catalytic activity to substrate; and isolating the catalytic antibodies; which can be used for in vivo activation of a prodrug. Sequences AAW95484-489 represent genetic sequences of heavy and light chains of RT3 specific phage antibodies selected from a naive human phage antibody library *555555555555555555555

WPI; 2001-388931/41. N-PSDB; AAH68663 New isolated protein, preferably a human anti-Rh(D) antibody for use in diagnostics requiring a human instead of an animal antibody and in diagnostics requiring therapeutic medicine.

Claim 1; Col 45; 162pp; English.

The present invention describes an isolated Rh(D) binding protein, preferably a human antibody, (I) having an amino acid sequence comprising one of the sequences (S) given in hAQ91558 to AAQ93669. (I) has immunostimulant activity, and can be used as an immune system stimulant.

The present invention describes a method for detecting the presence of fibronectin isoform B (B-FN) in body fluid of an individual. The method involves passing the fluid over a solid support (SS) to which gelatin that binds FN is attached, such that if FN is present, it is retained on SS by binding gelatin, and determining the presence of B-FN on SS by determining the ability of a specific binding member for extra domain B (ED-B) of B-FN to be retained on SS. The method is useful for the quantitative determination of B-FN in a body fluid taken or collected from an individual. Other methods from the present involution can be used: for quantitating the amount of an insoluble marker protein in a sample of tissue or tumour. An elevated level of B-FN in a body fluid sample of tissue or tumour. An elevated level of B-FN in a body fluid cuch as plasma, cerebral-spinal fluid or cystic fluid obtained from an individual is indicative of the presence of a tumour in the individual. The methods are useful in diagnostic and prognostic situations. The
                             are used in diagnostics that require human antibodies instead of animal antibodies, such as determine the Rh phenotype of human red blood cells. AAH68015 to AAH68726 represent the nucleotide sequence which encode AAG93558 to AAG93669. AAG93670 to AAG93697 represent anti-Rh (D) heavy chain CDR3 amino acid sequences which are given in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Detecting fibronectin isoform B in body fluid of an individual, by binding fibronectin to gelatin on solid support, and determining ability of specific binding member for Extra Domain B to be retained on support.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Fibronectin isoform B; B-FN; extra domain B; ED-B; antibody; VL domain; angiogenesis; neoplasia; tumour; detection.

                                                                                                                                                                                                                                                        Region
                                                                                                                                                                                                                                                                                  Region
 AAV02501-AAV02635, and AAV02641-AAV02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain. light chain,
and heavy chain complementarity determining regions (CDR) of the
invention. The antibodies can be used in the treatment of obesity and
cobesity related diseases. The antibodies can be used to deliver drugs or
pro-drugs directly to the far mass of an obese patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
caplement mediated lysis. The antibodies binding specifically to
by complement mediated lysis. The antibodies binding specifically to
cadipocytes can be used to activate the immune system to destroy the cells
by complement mediated lysis. The antibodies may be labeled with a
catectable label such as radiolabel, fluorescent or chemical group and
used in methods of diagnosis in human subjects e.g. to determine the
presence of adipocyte antigen on the surface of an adipocyte to detect or
determine the presence or level of adipocytes in a cell or tissue sample.
The antibodies can be used as an alternative means of treatment for obese
patients other than undergoing surgery to remove excess fat. Antibodies
for different types of fat deposits can also be produced e.g. intra-
abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                  Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present sequence is that of the light chain variable region (VL) of human single chain antibody (scrv) HID-3 (see AAY95219), which is directed against platelet glycoprotein ID (GPID). The HID series of scrv was isolated from a human synthetic VH and VL scrv library by 3 rounds of phagemid selection against transfected CHO cells expressing the GPID phagemid selection against transfected CHO cells expressing the GPID component of the GPID/IX/V complex on their surface, followed by a thround of selection against washed human platelets, and 2 final rounds in which attempts were made to displace scrv from washed platelets by 10 which attempts were made to displace scrv from washed platelets by 12 control of secreted as free scrv by Escherichia coli, the HID scrv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scrv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes: They provide a new class of antithromboit aggregation of platelet dependent thromboit in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Wethods of inhibiting any any of villatelets, of binding human platelet chibits platelet aggregation are claimed inhibits platelet aggregation are claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
Isolated nucleic acid molecule encoding anti-human platelet glycoprotein

The present sequence is that of the light chain variable region (VL) of human single chain antibody (scPv) HID-1 (see AAY95198), which is directed against platelet glycoprotein ID (GDL). The HID series of scFv was isolated from a human synthetic VH and VL scFv library by 3 rounds of phagemid selection against transfected CHO cells expressing the GPID calpa component of the GPID/IX/V complex on their surface, followed by a thround of selection against washed human platelets and 2 final rounds thround of selection against washed human platelets by Tlooding with murine monoclonal antibody or mimotope peptide (see AV95229). Whether displayed as surface proteins on a phagemid or secreted as free scPv by Escherichia coli, the HID scPv clones are capable of inhibiting von Willebrand factor-dependent aggregation of platelets. The scPv are composed of native human protein sequences and are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombot in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acid molecule encoding anti-human platelet glycoprotein Ib alpha molecule useful for producing antibodies which inhibit platelet

The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human serum amyloid protein, to pass through a mammalian blood brain barrier (BBB). The panel is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind endothelial cells or other brain cell antigen, ability to bind areas of inflammation in the brain or BBB breakdown or ability to bind intracellular adhesion molecules and to bind transferrin receptor. The

The HID series of scFv was isolated from a human synthetic WH and VL scFv library by 3 rounds of phagemid selection against transfected CHO cells expressing the GPID phagemid selection against transfected CHO cells expressing the GPID at the round of the GPID/IX/V complex on their surface, followed by a 4th round of selection against washed human platelets, and 2 final rounds in which attempts were made to displace scFv from washed platelets by flooding with murine monoclonal antibody or mimotope peptide (see AAX95229). Whether displayed as surface proteins on a phagemid or secreted as free scFv by Escherichia coli, the HID scFv clones are capable of inhibiting von Willebrand factor-dependent aggregation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated nucleic acid molecule encoding anti-human platelet glycoprotein Ib alpha molecule useful for producing antibodies which inhibit platelet

                 are therefore attractive potential reagents for therapeutic purposes. They provide a new class of antithrombotic agents, useful for the prevention of platelet-dependent thrombi in diseased arteries, bypass grafts, dialysis etc., and can also be used as diagnostic reagents. Methods of inhibiting aggregation of platelets, of binding human platelet GPIb alpha and of selecting a VH or VL region of an antibody that inhibits platelet aggregation are claimed
The scFv are composed of native human protein sequences and

Sequence 50, Application US/09240274

Patent No. 6255455

GENERAL INFORMATION:

TITLE OF INVENTION: Bh D) -BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL

TITLE OF INVENTION: SOFTING METHOD FOR PRODUCTION THEREOF

FILE REFERENCE: 09596-42U2

CURRENT APPLICATION NUMBER: US/09/240, 274

CURRENT APPLICATION NUMBER: 06/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER PILING DATE: 1998-04-10

EARLIER PILING DATE: 1996-10-11

NUMBER OF SEQ ID NOS: 224

SEQ ID NO 50

LENGTH: 106
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      APPLICANT: Siegel, Donald L.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SOFTING METHOD FOR PRODUCTION THEREOF
FILE REPERBNCE: 09596-4122
CURRENT APPLICATION NUMBER: US/09/848,798
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
